as with the cattle industry, is a covert cause for personal attacks on other grounds.

A third enterprise, trucking, has caused a realignment of political interests in factions associated with two truck-owning cooperatives. Membership in one of the cooperatives, or patronage of one of the two trucks, arouses the enmity of members of the other cooperative. Several threats have been made on the lives of the owners and the operators, but the only damage done has been to tires.

The tensions resulting from the introduction of these new enterprises cannot be fully measured by the deaths attributed to direct economic conflict. Wealth differences resulting from the new enterprises excite envy, and with it come accusations of witchcraft. In this community, witchcraft killing does not perform the normative function of reducing wealth differentiation that Kluckhohn saw operating among the Navaho (1944), since it is the poor man who is killed as a witch, not the rich man. The slaying of the envious witch exacerbates the economic differentiation that provides the seedbed for conflict.

Another new source of tension is found in the growing demand for political leadership or even independence from the township by the *ejido* colonies formed since land reform went into effect in 1937. The inept maneuvers of two founders of the ejido colonies in hot country resulted in two homicides (cases 12 and 18 in Table 1).[4] The increasing strength of these hamlets will mean that more attempts will be made in the future to gain political equality and or independence. Whether this will result in increasing homicides will depend on social-control agencies external to the Indian communities.

Homicide occurring as a direct result of economic and political competition represents a new strategy in the community. The decision to kill rather than to use other negative sanctions is related to the social-control mechanisms discussed below.

Changing Mechanisms of Social Control

A system of social control rests not only on the exercise of negative sanctions, but on the sense of personal security derived from confidence in the institutions of control. In Teklum, the maintenance of control was formerly centered in the guardianship against malevolent spirits held by the ancestor spirits and the curers. The "police force," made up of ten

323 pyramid is complete, wood is laid against the pots in a tepee formation.
[313] When the sawmill in the vicinity was in operation, flat boards—scraps of
[372] cut lengths—were used, but now only logs are available. Corn husks or
[462] dry straw are stuffed between the planks or logs. When a large number of pots are being fired, the men usually help at the final stages to remove the
[476] charred planks with poles. If men are not available, the women of the household often call upon their neighbors for help. In this operation, the
[292] women wear sandals and hats for protection from the heat. When the pots are cooled, the women, sometimes with the help of the men, stack them in net bags, six to a net with straw protecting the pots.

647 About fifteen year ago, a kiln was introduced by the government in the
177 interest of conserving wood. Those who tried it claim that the pottery did
323 not fire well and that many of the pots were broken. I.N.I. (the Instituto
372 Nacional Indigenista) planned to introduce an improved kiln, and while most of the people we questioned expressed a willingness to try it, the proposal was never put into action.

462 The men do most of the marketing of pottery. Loads of one or two
442 dozen may be taken by bus or truck to San Cristóbal or to Comitán.
443 When there is large-scale production throughout the community, as occurs
494 just before major fiestas, truckers come from the neighboring town of Teopisca to contract for delivery.

592 The amount of pottery produced in households varies with the follow-
323 ing factors:
433

1. Household composition: (a) Number of women in the family.
[464] If there is only one woman, very little or no pottery is produced because of the demands of domestic duties. Households with two or more women are able to sustain the ideal output of at least a dozen water jugs a week (I use "ideal" here to suggest their notion of what they produce when asked to guess. As Fig. 2 indicates, this varies considerably during the
[887] year.) (b) Age of women and ages of children. Older women over sixty do not independently undertake pottery production. They may assist in washing pots with corn gruel or making the neck, mouth, and handles, but they are unable to endure the harder task of collecting clay. A woman with infants under two years of age makes little pottery if

usual, and seeing the pesos, picked them up. The "spirit of the money" left the village forever. The story reveals not only the sense of deprivation Indians feel in losing wealth to Ladinos (historically land the Indians had lost through fraud or legal trickery during the Porfirio Diaz period), but also their realization of their own responsibility for letting their assets slip out of their control.

Payment of interest on money borrowed is justified in the calculations of the Indians for loans made within as well as outside of the community. Interest, called *shol tak'in*, or "head" of money, makes it possible for the borrower to work, and thus to earn, so the "owner" has the right to charge for the use. The rate on loans made within the pueblo has risen from 2 or 3 pesos a month for 100 pesos to 5 pesos, thus equalizing the rate with that charged in the neighboring Ladino town. The same rate is applied between relatives as nonkin. The advantage of intracommunity borrowing is that the lender does not demand an immediate return, or as high security. Ladinos of the neighboring town tend to demand items of greater value than the debt held as security—one Ladino held title to land worth 1,000 pesos for a 50-peso debt, and threatened to foreclose. Within the pueblo, security of about the same value as the loan is asked except in the case of neighbors and relatives who can be reminded every day of the debt. And they are.

Markets. In marketing, the Indians of Tzotzontahal have neither extended nor gained control over the selling and buying operations that have been pursued since before the opening of the Pan-American Highway in 1955. The pottery which is produced locally was formerly carried on horseback to the smaller towns within a radius of fifty miles. The pottery was marketed directly by the men of the household which produced it, with no specialization in trading by commercial travelers, as had happened in the Zapotec and other areas of Mexico. Since the penetration of the Pan-American Highway, the men take the pottery produced in their households by bus or on the trucks to either San Cristóbal or Comitán. This tends to polarize trading operations and dry up the traffic into small towns not connected by the highway. As a result, the wholesale trade in San Cristóbal and Comitán has increased in the past decade, with dealers

7: Nash E-5 (1957-1967) 1970 NV9 Tzeltal NV9
Amatenango del Valle

members entry to the ejido colony, an area where traffic was formerly excluded because of the monopoly by the large trucking companies. Both the fruit and root of chayote are sold in August by some families who have a supply over consumption needs. It is brought along with pottery to the market of San Cristóbal where it is sold to *regatones,* retail sellers who have stalls.

Decisions as to what crops to plant are not responsive to market fluctuation. With the major emphasis on subsistence crops, the farmers have little margin of land on which to experiment with profitable but risky ventures. They have little knowledge or experience. There are no full-time specialists in market operations, although the truck drivers may gradually assume a greater role in this respect.

Very few Indians of the region, and none of those in Tzo'ontahal sell corn to the National Warehouses (Almacenes Nacionales de Deposito), although the warehouses offer prices higher than the going market price for corn. (940 pesos per ton in comparison to 500 to 600 pesos at harvest or 800 pesos offered a few months later by wholesalers who come to town). The reason for their failure to take advantage of the higher market price is that they do not have sufficiently large crops to pay the transportation costs of 28.75 pesos or the "tip" to ensure that their crops will not be declared substandard because of impurities, rotten kernels, insects, or excessive water content. In addition to that, they must spend time at the warehouses and in traveling. The alternative to the sale of crops to national warehouses is sale to wholesalers.

Dealing with external agencies. Entering into competitive areas where they were formerly excluded, the Indians are encountering opposition from competitors and are the prey of departmental and state government agents. The reduplication of bureaucracies at the state and departmental level means that they will be subject to the double "bite" or *mordida* if they pursue their enterprises. Operating on minimal capital, they are not able to fulfill all the requirements, or buy all the necessary permits and licenses. Because of monopolization of certain traffic by the larger syndicates of truck owners, they proceed without permits and are often caught.

port. At his death, he had no successor, and "the town remained in peace."

In this first political contest, the conflict was interpreted as opposition between the dual divisions. Factional disputes and the sense of political responsibility and control were contained within these parameters, and any conflict was conceived of as a threat to territorial balancing mechanisms.

The new factions that have developed since 1963 are tied to economic rather than territorial competition. In 1960 the first truck-owning cooperative was organized under the leadership of the former Ladino secretary. The twenty shareholders of the town had only a small amount of capital in the truck, and the controlling interest was in the hands of the secretary's wife. The cooperative was merely a device to gain business in carrying pottery and wheat from the town to the market centers. In 1963 a new truck-owning cooperative was organized by local Indians. The two brothers, Santiago and José, secured capital to buy the truck from thirty residents of the town without any assistance from outside. The shareholders of the new cooperative came from both sides of the dual division, and from the outlying barrios.

When the leaders of the new cooperative tried to get permits and certificates to license the car and the operator, they were refused by the town president who was a shareholder of the first cooperative. The Indians then hired a Ladino truck driver from the neighboring town, and the son of one of the shareholders served as assistant. They realized that it was necessary to get control of the local political positions in order to extend their operations. With the help of the schoolteacher, they got eighty-one signatures on the petition for the PRI candicacy of one of the brothers, José, in the presidential nomination of 1964. He was opposed by a ladinoized Indian living in one of the barrios who was backed by the Ladino secretary who was leader of the competing trucking cooperative. The opponent did not have a chance of winning, as the leaders of the new cooperative pointed out, because of two strikes against him: he was not a resident of the center and he had only PAN backing. The Indians are aware that nothing can be gained politically by a PAN-backed president since PRI is now the party in control of regional and national offices.

After José's election, the Indian truck driver was able to get a driving license. With the help of the schoolmaster, the cooperative was able to get

these apparently irrelevant comments reveal the power play going on behind the scene of the ritual.

The observed schedule for the civil inauguration (App. 1, column 4) differed from the elicited in four details. The first of these was an item omitted by both informants: after liquor was served in the house of the president, the entire company stood up and "turned toward the wall" (App. 1, Q. 20). When I questioned my informant, he corrected the orientation "toward the wall" and said that they were turning toward the east in deference to the leader of all the saints of the east, led by Santo Aχio. He said that it was done in all household celebrations in order "to be sure that the devil does not enter." Belief concerning these saints is fragmentary, and perhaps because of this, behavior relating to them is not easily recalled. These behavioral sherds, when cut off from the belief system they once dramatized, survive in "perpetuating the custom of the ancestors" *(hič sluwar hič likem me?tiktatik)*.

Another detail not mentioned by informants was the presence in the house of the president of the rural colonia inhabitants (Chart 6). This omission is typical of the neglect in reporting the activity or presence of anyone other than residents of the center. When I asked what they were doing there, I was told they came "to know the president."

Finally, an important divergence from expected behavior occurred when the schoolteacher, instead of the secretary, delivered the oath of office. This change was evidence of the schoolteacher's success in a factional struggle developing around new economic enterprises in the town. The former Ladino secretary was in close alliance with the former president and had supporters in the group of 20 co-owners, Indians from the village, of the truck when he had purchased. When the incoming president with his brother bought a truck with the assistance of 30 members of a truck-owning cooperative, a new focus for factional strife appeared in the town. The new cooperative was supported by the schoolteacher in his own bid for power. When the truck owners ran into any difficulty with the highway patrol, carrying wood or passengers without permit, the driver would refer them to the schoolteacher, who would then claim it

Tzo?ontahal

was done at his order for the school.[11] The new co-operative was harassed by the old group, since the president did everything in his power to cut down their competition. As fiscal, his other role, he maneuvered the appointment of the chief business agent of the new truck cooperative and three other members as *niẽ'anil martomaetik*, junior caretakers of the saints. This meant that their Sundays were occupied in church affairs and cut into their taxiing of passengers from Tzo?ontahal to Himsol, the neighboring Ladino town.

The nomination of the president was effected by winning the support of the Partido Revolucionario Institucional (PRI). Supporters of the nominee secured over 85 signatures from townspeople; the opposition candidate failed to get more than 28. Once PRI support was obtained, the election on November 20 was assured since one-party rule prevails here as in the capital. This is the first election which has been contested in 10 years. The last contest came when some members of the barrio of Yut' hok became members of the minor party, Partido Acción Nacional (PAN). Because this group and their presidential candidate all came from one side of the dual division, Alannantik, those from the other side said that they should have a party representative. They drew up a plan to run a candidate on PRI. The PAN candidate won. The present contest was drawn on the basis of membership in the truck-owning cooperatives which cut across the dual division.

The present nominee did not want to run for office. Early in the running there were verbal threats on his life. He had never passed in any office other than that of president of the ejido commission, and although the office of president is not a rung in the ladder to office, it is expected that the incumbent would at least have experience as síndico. Three sources of opposition to his candidacy developed. First in importance was the original trucking cooperative, which objected to the competition of the president and his faction in the new cooperative. Second, these members spread the rumor that the new president would bring in federal agents to break up the liquor traffic, which was becoming one of Tzo?ontahal's most important economic self-development projects. Thus all the distillers were apprehensive of their future under his term of office. Third, there was opposition on the

[11] Siverts (1964) describes Ladinos' "competition for each others' Indians in Cancuc."
